Monthly Safety Training

CHECK THE HANDLE.

Check the handle before use for rough or jagged edges, and make sure the landing gear is straight, with no bending or warping. Make sure it is locked in.

THINK SAFE.

When handling the landing gear, always put one hand on the rub rail for support. Slow and steady motions help prevent accidents or injuries.

RELEASE THE PRESSURE.

If the landing gear is in a bind when raising, put it in low gear until the pressure is off.

FOLLOW LANDING GEAR SAFETY POLICY.

Our Risk Management team has put together a Safety Policy specifically for Landing Gear. Download it [HERE](#).

TAKE THE QUIZ!

We have created short, fun games for each monthly safety training topic. Scan or click the code to play along!
